After selecting the stake and pressing the START button, the selected stake is deducted from the CREDIT panel and the optically represented rollers start spinning. If after the rollers stop they display at least one winning combination shown on the winnings table, this win is added to the WIN and it is possible to enter the GAMBLE game or to add the WIN to the CREDIT. If the game is running in AUTOSTART mode, then the winnings are automatically transferred from the WIN panel to the CREDIT panel. The game is considered as being finished after adding the WIN to the CREDIT. If after the rollers stop there is no winning combination shown, then the game is considered as being finished. After the game finishes, the data terminal is immediately prepared for a new game.

**AUTOSTART:** After pressing the AUTOSTART button or if AUTOSTART is selected on the touch-screen, the unit automatically continues in the game unless the credit runs out or unless the AUTOSTART button is pressed again or unless AUTOSTART is selected on the touch-screen.

**GAMBLE:** This game is offered when win animation is shown. The player can enter the Gamble game pushing the Bet/Gamble button or touching Gamble shown on the touch screen. It is played for the sum in the WIN field. You can select whether there will be a card with red or black symbol. If you guess it right, the sum is doubled, if not, the whole sum is lost. You can split the sum by pushing the SPLIT button. When you split, one half of your money is added directly to CREDIT field and you can play GAMBLE with the second half. By pushing the ADD you can leave the game anytime and add the winning from the WIN field into CREDIT field.
